

China's Toxic Toys ... what's next? Toxic Evaporative Cooling Pads?

**BE SAFE! — Demand only PROVEN, SAFE, RELIABLE,
HIGH PERFORMANCE CELdek[®], Küül[®], and GLASdek[®]**

**Are you willing to gamble with
your health and the health of your
customers to save a few bucks?**

What about the health of our planet's environment?

Is it worth the risk?

You have read the stories and seen the recalls on the news,
Chinese manufactured toys and pet food recalled because of “toxic” materials utilized.

There is a reason those Chinese import pads cost less, poor or nonexistent safety production procedures,
no environmental protection rules for disposal of production chemicals, as well as Chinese labor practices.

The re-called pet food, which used hazardous, tainted ingredients, caused the deaths of potentially hundreds of
dogs and cats. The recalled toys were made with lead based paint and other harmful levels of materials.

But unlike the Chinese manufactured toys, evaporative cooling pads don't just sit in a corner of the room with their toxic
levels of manufacturing materials, they are placed in an air handling unit with the air that you breath passing through them.
In fact, the pad is designed to optimize material-to-air flow contact for higher performance but if the pad has unhealthy levels
of harmful chemicals than it ends up in the air that you are breathing every day.

These **imported “toxic” pads** come from the land of poor to non-existent quality and safety control,
and **NO EPA REGULATIONS OR GUIDELINES.**

The pads we stock are manufactured with stringent quality control practices that follow the EPA's strictest safety and health
requirements. The pads that we carry have been proven over decades of use to be safe for your customers.

In fact, tests have shown that, compared to our well established pad manufacturers, **some Chinese pads are
manufactured with more than 300 times the regulated amounts of necessary
components established by the EPA in the United States.**

Check out the MSDS sheets yourself. MSDS sheets for the pads we carry are readily available for your review on the
website www.HaveACoolDay.com Just try to get a valid MSDS sheet on any of the Chinese manufactured pads.

**Don't take a chance with your health or the health of your customers, demand our high
quality, proven healthy and safe, high performance evaporative cooling pads.**

***** Munters CELdek/GLASdek pads have over 35 years of successful application *****
***** Küül pads have over 10 years of successful application. *****
